Russia keen on selling MiG-35 fighter jets to Indian Air Force: Official

The Indian Air Force has initiated major infrastructure upgrade at its frontline base in Ambala for the deployment of the first squadron of the [Rafale](#) jets which will give India greater "potency" over Pakistan as these will be capable of carrying nuclear weapons and other missiles.

The government has already sanctioned Rs 220 crore to set up 14 shelters, hangers and maintenance facilities at the 78-year-old base for the [Rafale](#) jets whose delivery is scheduled to begin from September 2019, a senior IAF official said.

"We are creating infrastructure keeping in mind infrastructure requirement for the [Rafale](#) jets for next 40-50 years," the official said on condition of anonymity as he is not authorised to speak to media.

The Ambala base is considered one of the most strategically located bases of the IAF as the Indo-Pak border is around 220 km from it. Currently, the base has two squadrons of the Jaguar combat aircraft and one squadron of the MiG-21 Bison.

Marshal of the IAF Arjan Singh, who passed away two weeks ago, was the first commander of the Ambala base in independent India.

Several teams from French defence major Dassault Aviation, the manufacturer of [Rafale](#), have already visited the Ambala air force base and finalised the requirement for the first squadron of combat jets.

The IAF is also carrying out infrastructure upgrade at its Hasimara base in West Bengal which will house the second squadron of the [Rafale](#) jets, the official said.

In September last year, India had signed a Euro 7.87 billion (approx Rs 59,000 crore) deal with the French government for the purchase of 36 [Rafale](#) fighter jets. Eighteen [Rafale](#) jets will be deployed in Ambala while an equal number of the new generation jet will be stationed in Hasimara.

"We are planning to put in place all required infrastructure for [Rafale](#) squadron by end of next year," said the IAF official.

The Ambala and Hasimara stations will also have simulator-based training facilities for the aircrew of [Rafale](#) jets. The IAF has already selected a batch of pilots to fly the jets and they are being given training by Dassault Aviation in France.

The [Rafale](#) squadron to be deployed in Ambala will be known as Golden Arrows which was originally based in Bhatinda and was disbanded two years ago.

The [Rafale](#) combat jets will come with various India-specific modifications including Israeli helmet-mounted displays, radar warning receivers, low band jammers, 10-hour flight data recording and infra-red search and tracking systems among others.

The features that make the [Rafale](#) a strategic weapon in the hands of IAF, which is currently down to 34 squadrons as against a sanctioned strength of 44, includes its Beyond Visual Range (BVR) Meteor air-to-air missile with a range of 150 KM.
